Crownjun 12-0S Microsuture Needle

0.8mm length
30µm diameter

At 0.8 mm in length and 30 µm in diameter, our USP 12-0 microsurgery needles with attached micro nylon thread are the smallest suture needles in the world. Our micromachining technology enables us to manufacture suture needles of a quality high enough for supermicrosurgery. The quality of our micro nylon thread is extremely consistent.

In Japan, our Crownjun micro nylon suture thread is preferred by most surgeons who perform procedures such as lymphaticovenous anastomosis when surgically treating lymphedema.

The high quality of our 11-0, 10-0, and 9-0 suture needles is underpinned by our technical capacity for manufacturing high quality 12-0 suture needles. Furthermore, our suture needles have also long been used for conventional microsurgery.
